Connecting to Your EDC Website

Using a framing technique, common in most websites, Catylist offers different options for powering your website.

- Catylist-Hosted Frameset**
 Catylist creates customized property listing pages that maintain your branding standard (logo, font, and color scheme). Catylist then hosts these pages within a frameset on its server and you link the "property listings" portion of your website to these pages. This method involves minimal effort for you to set-up **EDCLink**.
- Client-Hosted Frameset**
 If your site already uses frames, Catylist creates property listing pages that match your color scheme. Catylist sends your web developer a list of URLs, which then get framed within your existing website. This method offers greater flexibility to tightly integrate the property listings into your website.
- Please contact me to discuss the set-up method.**

Once you have completed this form, please fax it to **734.973.3188** or email it to shane@catylist.com. Questions contact 210.215.9509.
